

Introduction

PD Dr. Ralf Stecking and **Abigail Opokua Asare**

Department of Business Administration,
Economics and Law

Institute of Economics
Carl von Ossietzky University Oldenburg

14 October, 2025

[illegible]

Course Arrangements

This course consists of **4 contact hours per week**:

- ▶ **Lecture:** Tuesdays, 16:00-18:00, in A05 0-055
- ▶ **Practical Exercises:** Thursdays, 12:00-14:00, in A05 1-161
 - ▶ Provides hands-on practice with theoretical concepts from the lecture using RStudio.
 - ▶ The first session will be held on **Thursday, 16 October 2025**.

Course Materials

All course materials can be accessed via:

 **StudIP:** Lecture slides (from next week), announcements, problem sets, data sets, and additional information.

 abigail.asare@uol.de

 **Office Hours:** Mondays 10:00-12:00 (please email in advance).

 **Room:** A05-0-071

Course overview/ winter term 2025/26

Date	No.	Lecture (Tue 16-18)
14 Oct.	1	Introduction
21 Oct.	2	Time series and its components
28 Oct.	3	Regression analysis for trend and smooth component
04 Nov.	4	Moving averages + Exponential smoothing
11 Nov.	5	Constant additive and multiplicative season figures
18 Nov.	6	Multivariate forecasting: Multiple regression I/II
25 Nov.	7	No Lecture
02 Dec.	8	No Lecture
09 Dec.	9	Stationarity of time series / AR+MA processes
16 Dec.	10	Box-Jenkins approach I/II
		Christmas holidays
06 Jan.	11	No Lecture
13 Jan.	12	Box-Jenkins approach III / Error measures of the forecast
20 Jan.	13	Logistic regression for credit scoring
27 Jan.	14	Revision

Definition I

- ✓ Forecasting is the process of providing information about expected effects and developments. In other words, it is the prediction of future events.
- ✓ Forecasting could be short, medium or long-term.
- ✓ Who forecasts and why?
- ✓ Complexities of Forecasting:
 - ▶ How much data exists?
 - ▶ What is the required forecasting time horizon?
 - ▶ Are forecasts expected to be adaptive over time?
 - ▶ Frequency
 - ▶ Outliers
 - ▶ Missing
 - ▶

Definition II

- ▶ Time series analysis vs. forecasting (prediction)
- ▶ Qualitative vs. Quantitative methods
 - ▶ Qualitative methods (little or no historical data):
 - ▶ Expert consultation (subjective judgment)
 - ▶ Indicator/bellwether methods
 - ▶ Quantitative methods (data-driven): There are three well know basic approaches to generating forecasting:
 - ▶ Regression based
 - ▶ Smoothing methods and
 - ▶ General time series models.

Regression model

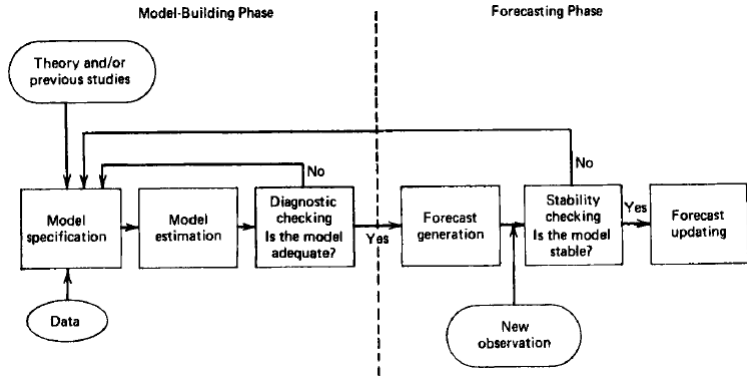

- ▶ Regression model as “basic model” for quantitative (multivariate) forecasting methods.
- ▶ Relationship between *one* dependent and *one* or *more* independent variables or time series:
- ▶ Techniques:
 1. Linear regression

$$\hat{y} = \beta_0 + \beta_1 x_1 + \dots + \beta_J x_J$$

2. Logistic regression

$$P(y = 1) = \frac{1}{1 + e^{-(\beta_0 + \beta_1 x_1 + \dots + \beta_J x_J)}}$$
